

Roberts Stadium, Princeton University, Princeton, N.J.

The new soccer facility features a three-sided stadium, a playing field with a natural grass surface and an adjacent practice field with an artificial surface. Three freestanding pavilions house a ticket office, press box, concession stand, team rooms, restrooms and other facilities. The stadium has a 3,000-person capacity and is lighted for night games.

The freestanding pavilions are roofed with 8,400 square feet (780 m²) of Englert's 16-inch- (406-mm-) wide Englert Series 2000 standing-seam metal roof panels with ribs formed from 0.04-aluminum painted preweathered Galvalume Metallic.

Architect: Anderson Architects, New York
